What is the 370m PDT digital cluster system?

The 370M PDT digital cluster system includes a PDT +LTE broadband-narrowband fusion core network,a fixed base station,a mobile base station,an integrated command and dispatching center,a site emergency communication system,and terminal equipment.

What is the 370m narrowband private network?

The 370M narrowband private network was the first narrowband wireless communication network used for emergency command in China. When major disasters occur,there are often "three noes",of no power,no network,and no road. In this case,the narrowband private wireless network significantly improves the capability of ensuring communication.

Where is the portable broadband-narrowband integration emergency command system deployed?

The portable broadband-narrowband integration emergency command system is deployed in the forward headquarters. Adoption of the multi-link aggregation mode of the public network and LTE private network enables multimedia cluster services such as voice,video,and data. Figure 10.

What is an emergency communication system?

An emergency communication system comprises the integration and application of various communication technologies and approaches in an emergency.

This standard specifies technical requirements for emergency cellular communication systems based on large fixed-wing unmanned aircraft systems. It provides the ...

The 370MHz emergency command narrowband wireless communication network is a dedicated command wireless network for emergency management nationwide. It adopts PDT ...

Calтта won the bid for the Hainan Province Natural Disaster Emergency Capability Enhancement Project Early Warning Command Project, providing370MHz fixed stations,/ mobile stations,/ ...

system based on large fixed-wing unmanned aircraft system are presented. The requirements are described in six categories: system architecture, UAV platform requirements, ...

During this Expo, BelFone mainly exhibits four part which include in 370M emergency DMR Trunking
