Should ASEAN continue its energy transition?

If ASEAN continues its energy transition at the current pace, it risks missing out on the opportunities provided by the declining costs of wind and solar, now cheaper than fossil fuels. Between 2018 and 2022, 38 GW of renewable energy capacity was added, with about 44% coming from solar capacity growth in Viet Nam.

Does ASEAN have an Energy Transition Index?

In 2025, most ASEAN countries had achieved an energy transition index higher than the average, reflecting the region's efforts towards energy transition. One of the critical aspects of the energy transition is ensuring that the necessary infrastructure, technologies, and policies are in place to accelerate the integration of renewable energy (RE).

How much energy does ASEAN need?

At least \$200 billion needs to be invested annually to generate sufficient energy to fuel the region's rapid development. At the same time, ASEAN member states' geographical features and resource-based economy render them among the most vulnerable parts of the world to climate change.

What is the ASEAN Energy Outlook?

Under the ongoing global shift towards renewables, the 8th ASEAN Energy Outlook predicted that demand for jobs in the renewables sector will continue to increase, primarily in operation and maintenance. ASEAN has acknowledged that setting up a foundation for sustainable economic growth is crucial for its member states to maintain resilience.

While ASEAN member states are implementing energy storage technologies, policy gaps are slowing wider adoption and hindering the full renewable energy utilisation. ...

The workshop gathered representatives from ASEAN power utilities, energy experts, and consultants to advance regional dialogue on integrating emerging technologies ...

This paper explores the role of BESS in the ASEAN energy landscape, examining current trends, benefits, challenges, and the pathway towards optimising its potential across the region.

A call for swift and fair climate action and energy transition, emphasising the need for financial mechanisms to support these efforts. A focus on the importance of developing and ...

This report provides a brief overview of ASEAN's power sector landscape in 2023, tracks energy transition development in the past five years, presents several scenarios on ...

Smart microgrids - combining solar generation, battery storage, and digital control systems - are already being deployed in off-grid communities across Indonesia and Malaysia.

Addressing critical issues such as energy security, renewable energy storage, and emerging sectors like green hydrogen, Razib underscores the need for stable, affordable, and ...

In parallel, greater investment and regulatory support should be directed towards battery energy storage systems (BESS) and pumped hydro, which offer ancillary services with ...

In parallel, greater investment and regulatory support should be directed towards battery energy storage systems (BESS) and pumped ...

By expanding renewables and boosting regional energy links, ASEAN is set to power economic growth and remain resilient in the face of climate change
