White light emitting diode (LED) replaces the HID lamps due to which the light gets saved and the system works without any problem. For energy saving of solar based system, also a charge ...

This design utilizes a light-dependent resistor (LDR) and an STM32 microcontroller to work together for real-time solar tracking, optimizing solar energy captur

In this paper, the photoelectric method is used to track the position of the sun, the control process is modeled and simulated in the system. The system is optimally controlled by adding a ...

This design addresses the challenge of efficient solar energy utilization by proposing a solar charging automatic tracking system solution based on an STM32 ...

Its unique light-chasing algorithm enables the solar panel to continuously track the light source from sunrise to sunset, thus significantly improving the charging efficiency.

By combining solar energy with automatic light chasing technology, a solar dual-axis automatic light chasing charging system was designed based on an STM32F103C8T6 single-chip ...

This research paper presents the development of an autonomous photovoltaic street lighting system featuring intelligent control through a smart relay. The system integrates ...

Therefore, solar panels require an automatic solar tracking system to increase the efficiency of the solar panels. In this study, a solar tracker has been designed using a light ...

This design proposes a two axis solar tracking system based on the Internet of Things cloud platform. This system uses the sun viewing motion tracking method to drive photovoltaic ...
