Base station power button for 0 5 seconds

Title: Base station power button for 0 5 seconds

Generated on: 2026-02-21 14:50:04

How high should a base station be?

For proper tracking,set each base station at a lowest height of 0.5 m (1.6 ft). Depending on how high you set them up,you need to adjust the angle of the base stations upward or downward to fully cover the play area. Secure the base stations in a location where they can't be easily jostled or moved.

Where should a base station be located?

Secure the base stations in a location where they can't be easily jostled or moved. For best performance,trackable objects should be at least 0.5 m (1.6 ft) away from a base station. Avoid setting up in an area with bright light,which may negatively affect the performance of the base stations.

How do I connect a base station to a host computer?

A Base Station can be connected directly to the Host Computer using an RS232C interface,or via network by using the Ethernet connector (optional feature). The Hand Terminals can send/receive data to/from the Host Computer using the specific Communication protocol. Data transfer between the system components is always check summed and acknowledged.

How do I set up base stations?

You may set up the base stations in a way that's suitable for your place. For best results,you may follow these recommendations: Mount your base stations diagonally,at opposite corners of your space. Each base station has a 150-degree horizontal field of view and a 110-degree vertical field of view.
