Its portability and foldability make it ideal for temporary or emergency power needs, such as construction sites, outdoor activities, military operations or disaster relief. In addition, ...

This includes unidirectional charging, which optimizes the point of time and duration. In addition, bidirectional charging or vehicle-to-X (V2X) allows the discharge of ...

This is the product of combining collapsible solar panels with a reinforced shipping container to provide a mobile solar power system for off-grid or ...

The aim of the project was to optimise the geographical and temporal distribution of surplus energy from renewable energy systems (RE ...

Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's ...

The technology enables charging the batteries of electric vehicles and transferring the stored energy back to the stationary storage ...

This is the product of combining collapsible solar panels with a reinforced shipping container to provide a mobile solar power system for off-grid or remote locations.

By addressing these factors, the paper aims to provide an initial roadmap for realizing the practical benefits of bidirectional charging technology in Dresden's urban context, contributing ...

Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure.

Its portability and foldability make it ideal for temporary or emergency power needs, such as construction sites, outdoor activities, ...

Bidirectional charging of photovoltaic folding containers at construction sites
