---

China's recent decision to restrict exports of lithium iron phosphate (LFP) and lithium manganese iron phosphate (LMFP) battery cathode active material technology is more ...

The bottom line? Chinese storage providers aren't just exporting products - they're establishing new operational blueprints that European utilities are scrambling to adopt. With 56.5 GWh of ...

A boom in battery storage has bolstered the demand outlook for lithium in 2026, driving hopes for an accelerated turnaround for an industry struggling with oversupply.

The updated results demonstrate that economically strong regions such as China, Europe and the USA leverage their capital power to significantly increase their influence ...

Both regions have rolled up their sleeves to tackle grid instability and renewable intermittency through bold policy frameworks. But here's the kicker: China-Europe energy ...

Europe's ambition to be a world player in decarbonised transportation arguably depends on sourcing lithium abroad, especially in South America. Even the bloc's broader ...

China, Europe, and the USA have ambitious EV plans, yet EVs depend heavily on lithium, raising concerns about supply allocation among regions amid potential global shortages.

CATL flooded the domestic market with inexpensive, efficient batteries. It wants to do the same overseas, but European politicians--and Donald Trump--stand in its way.

China's reforms in the power sector have helped fuel a stronger than expected demand in 2025 for lithium, which is used in batteries to store power. This has led to a ...

As China's inaugural hybrid grid-forming energy storage project, it combines 10MW/20MWh lithium-ion batteries, 1MW/5min supercapacitors, and 200kW/400kWh sodium ...
