OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentivesChina is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity.

As part of this initiative, it has now converted a former coal mining site into its largest single-capacity solar power plant.

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 ...

China's 13th Five-Year Plan for Solar Energy Development contained specific goals for solar technology innovation, including commercialized monocrystalline silicon cells with an efficiency ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. ...

China's 13th Five-Year Plan for Solar Energy Development contained specific goals for solar technology innovation, including commercialized ...

Solar power contributed a small portion of China's total energy use in 2020, accounting for 3.5% of China's total energy capacity. [11] Chinese leader Xi Jinping announced at the 2020 Climate ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

According to Electrek, China's 3 gigawatt Mengxi Blue Ocean Photovoltaic Power Station in the vast, remote Gobi Desert came online ...
