NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

In March 2004, a team of astronomers announced the discovery of a planet-like transneptunian object orbiting the Sun at an extreme distance, in one of the coldest known regions of our solar ...

The solar system consists of a central star, the sun, and all of the smaller celestial bodies that continuously travel around it, including our very own ...

The solar system includes the Sun, planets, dwarf planets, moons, rings, asteroids, comets, and particles of dust.

The discovery of a global ocean of liquid water adds Titan to the handful of worlds in our solar system that could potentially contain habitable environments.

Learn about the solar system in astronomy. Get its definition, discover the planets in order, and get interesting facts.

You are using an outdated browser. Please upgrade your browser to improve your experience.

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is ...

How many planets are in the solar system? How did it form in the Milky Way galaxy? Learn facts about the solar system's genesis, plus ...

Our Solar System contains planets, comets and asteroids all of which travel around our star, the Sun. Until 2006 nine main planets were listed, but ...
