Storage can replace thermal generation in constraint markets, easing the grid and supporting Portugal's 2040 phase-out target. Storage facilities can effectively deliver essential voltage and ...

Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. At a utility scale, energy generated during periods ...

By storing excess wind and solar energy as compressed air in underground salt caverns, this system can power 200,000 homes for 8 hours during peak demand. Think of it as a giant ...

We support projects from conceptual design through commercial operation and beyond. Our CAES solution includes all the associated above ground systems, plant engineering, ...

The plant employs a solution-mined salt cavern for storage and uses natural gas to reheat compressed air before expansion. Over the years, it has proven a stable source of ...
