They are also known as double-layer capacitors or ultracapacitors. Instead of using a conventional dielectric, supercapacitors use two mechanisms to store electrical energy: double ...

Lithium-ion capacitors - also called asymmetric capacitors or superbatteries - are typically based on a graphite or $\text{Li}_2\text{Ti}_5\text{O}_4$ negative electrode (the faradaic electrode) and an activated ...

Electrochemical capacitors use the double-layer effect to store electric energy; however, this double-layer has no conventional solid dielectric to separate the charges.

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today.
