This paper presents a dual-loop control system designed for three-level three-phase T-type converters, optimizing their performance in ...

Hybrid energy storage converters can enhance photovoltaic power systems' dynamic response and stability. However, traditional linear controllers exhibit deficiencies.

This study proposes a power management plan for an LVDC (Low-Voltage Direct Current) microgrid that is linked with solar energy and connected to a HESS (Hybrid Energy ...

In this study, based on the hybrid energy storage system of battery-supercapacitor, a dual-loop compensation method is proposed.

Considering that parallel inverter systems often face with various disturbances, this study proposes a new adaptive robust control strategy for a voltage-current dual-loop to ...

Therefore, this paper proposes a seamless transfer control strategy based on a unified control structure, which comprises a voltage outer loop and a current inner loop.

In this study, based on the hybrid energy storage system of battery-supercapacitor, a dual-loop compensation method is proposed. First, the small-signal model and output impedance matrix ...

This paper presents a dual-loop control system designed for three-level three-phase T-type converters, optimizing their performance in the hybrid operation of Power-to-X ...

In this study, based on the hybrid energy storage system of battery-supercapacitor, a dual-loop compensation method is proposed. First, the small-signal model and output ...

Therefore, this paper proposes a dual feedforward control strategy for TL Buck-Boost BDC applied in energy-storage inverters. The duty cycle control signal of the switches in ...
