What projects are being cut from the Department of energy?

Projects promoting hydrogen, electric vehicles, carbon capture and direct air capture are among the list of potential cuts from the Department of Energy, according to a leaked list reviewed by The Times.

What are the energy cuts affecting the energy industry?

The cuts include several long-duration battery storage projects to companies developing technology to support utilities in better storing power produced from renewable energy sources like solar and wind.

Should the Energy Department cut funding?

Some Republicans, however, urged the Energy Department to make cuts despite the potential economic hit to their states and districts, noting that many of the projects may be untenable even with the federal support. Sen. John Hoeven (R-N.D.) said he supports narrowing grant funding to "projects that are committed and are still viable."

Are more energy cuts coming?

Trump's Energy Cuts Punished Mostly Blue States. Red States Might Be Next. As New York and other states tally the damage, a leaked document suggests more Energy Department cuts may be coming.
