Why should Ireland support energy storage?

By supporting energy storage Ireland can enable more renewable electricity on the grid, reduce our reliance on imported fossil fuels and our exposure to volatile gas commodity prices while significantly lowering our carbon emissions. November 2024

Does Ireland need a policy framework for energy storage?

A robust policy, regulatory and commercial framework is needed to allow the deployment of energy storage in Ireland at the scale required to achieve current renewable policy objectives and our long-term decarbonisation ambitions. However, the current policy framework is unsuitable to deliver the volumes and types of energy storage we will require.

When will long duration energy storage be available in Ireland?

The Irish Electricity Storage Policy Framework, published after this data was collected, indicates that an immediate route to market for 500 MW of long duration energy storage is currently being developed, with further studies planned to support long duration storage from 2030 to 2040 (Government Of Ireland 2024a).

What changes are needed to increase energy storage development in Ireland?

The focus group participants noted several key second stage policy areas that required changes in order to increase the amount of energy storage development in Ireland. These included legislative changes, adjustments to the planning approval process, the development of forecasting models, grid improvements and the introduction of targets.

Experts across the sector agreed that energy storage will be crucial for balancing the increasing share of renewable energy on the grid while maintaining the security of supply, ...

Using focus groups and a survey with the renewable energy and storage sector, we document perspectives on the critical barriers, innovative solutions and policy gaps identified ...

We currently have more than 300MWs of battery storage capacity in operation in Ireland, making it one of the largest battery portfolios in Europe. We plan to develop a pipeline of large scale ...

Located in Donegal, Ireland, this pioneering initiative seeks to store 1 gigawatt hour (GWh) of energy utilizing advanced iron-air battery technology developed by Form ...

In June 2022, RWE assumed full operation of the Lisdrumdoagh Energy Storage Facility. With a capacity of 60 megawatts and 34 megawatt hours ...

Working together with partners from Finland, Iceland, and Faroe Islands, the Irish wanted to find out how to best integrate a battery storage and smart energy management in ...

ESB has officially opened a 150MW (300MWh) battery energy storage system (BESS) at its Aghada site in County Cork, marking a ...

ESB has officially opened a 150MW (300MWh) battery energy storage system (BESS) at its Aghada site in County Cork, marking a major milestone in Ireland's renewable ...

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key ...

This brochure highlights the benefits that energy storage can bring to Ireland in terms of security of supply, electricity price reductions and renewable energy integration.
