Permeable electrodes made of SIGRACELL carbon and graphite felts are the first choice for high-temperature batteries like redox flow batteries. Our felts are used for anodes as well as cathodes.

GFE-1 is an ultra-high quality PAN-based graphite felt with specialized fibers and weave that has been treated to achieve high liquid wetting and absorption. This material was specially ...

Flow battery electrode felt provides superior electrical conductivity, optimized porosity, and enhanced durability, making it an essential component for redox flow batteries, fuel cells, ...

Product Summary: 1pc Hydrophilic Graphite Felt for Flow Battery Electrode - PAN Based Carbon Delt with Excellent Conductivity and Porosity (2mm Thick 100x100mm)

GFE-1 is an ultra-high quality treated PAN-based graphite felt with specialized fibers and weave to achieve high wetting and absorption. This ...

Flow battery electrode felt provides superior electrical conductivity, optimized porosity, and enhanced durability, making it an essential component for ...

PAN-based carbon and graphite felts are used as electrode backings in a variety of battery designs including vanadium redox flow batteries (VRB). The high conductivity, high purity, and ...

GFE-1 is an ultra-high quality treated PAN-based graphite felt with specialized fibers and weave to achieve high wetting and absorption. This material was specifically developed for the ...

Here, we report a surface engineered carbon felt with abundant carbon defects, which realizes highly reversible Fe deposition/dissolution for all-iron flow batteries.

PAN-based carbon and graphite felts are used as electrode backings in a variety of battery designs including vanadium redox flow batteries (VRB). ...

Flow battery felt
