When the sun doesn't shine and the wind doesn't blow, humanity still needs power. Researchers are designing new technologies, from reinvented batteries to compressed air and ...

In 2024, the world added 585 GW of new renewable energy capacity, an all-time high, with wind and solar accounting for 96.6% of the total.

All power systems need flexibility, and this need increases with increased levels of wind and solar. There are many sources of flexibility such as from improved system operations, generators, ...

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and ...

Explore what 2025 holds for clean energy--from solar and wind growth to storage innovations and grid modernization. Key insights from FFI Solutions.

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids.

Maintaining reliability of the bulk power system, which supplies and transmits electricity, is a critical priority for electric grid planners, operators, and regulators. Based on the standards set ...

The need to harness that energy - primarily wind and solar - has never been greater. Batteries can provide highly sustainable wind and solar energy storage for ...

Yes, energy storage systems can be integrated with both solar and wind farms effectively. This integration addresses the intermittent and variable nature of solar and wind ...

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity.
