Helion Energy aims to produce low-cost, clean electric energy using a fuel derived from water. The plan is to produce electricity from ...

Helion Energy, backed by OpenAI's Sam Altman, has started constructing a nuclear fusion plant in Washington to power Microsoft data centers by 2028.

Helion Energy, backed by OpenAI's Sam Altman, has started constructing a nuclear fusion plant in Washington to power Microsoft data ...

After more than a decade designing and building record-breaking fusion machines, this is a significant moment for us as we prepare to bring ...

Founded in 2013, Helion is on the brink of realizing its long-standing ambition to build the first fusion power facility. In the wake of the first-ever fusion power purchase ...

Helion Energy aims to produce low-cost, clean electric energy using a fuel derived from water. The plan is to produce electricity from fusion by 2028 and supply the power to ...

Helion Energy announced that it has broken ground in Central Washington on what it hopes will be the world's first commercial fusion plant.

After more than a decade designing and building record-breaking fusion machines, this is a significant moment for us as we prepare to bring fusion power to the world!

The plant in Washington will leverage a unique direct energy recovery approach, aiming for more efficient, carbon-free electricity. With over \$1 ...

MIT spinout Commonwealth Fusion Systems has announced plans to build the world's first grid-scale fusion power plant in Chesterfield County, Virginia.
