What is Guardian Sunguard glass?

Our Guardian SunGuard glass products offer different levels of solar control and light transmission, and various aesthetic options to suit many applications. Solar control performance is achieved through the use of a very thin, transparent, and permanent coating that helps limit the solar energy entering inside.

What is solar control glass?

Solar control glass can also have different levels of reflectivity to provide transparency or a more reflective, almost mirrored glass effect, as well as a changing appearance during the day, to meet your aesthetic needs. There are many products available to choose from.

Can solar control glass be colored?

Our solar control glass is applied on clear float glass and has a neutral aspect, allowing more natural, truer views through the glass. However, if you wish, solar control glass can also be colored. Our solar control coatings can be applied on tinted glass to further help mitigate glare and solar heat gain.

What type of glass is best for solar panels?

On a clear-over-clear double-glazed configuration, SNE 50 coated glass provides 48% visible light transmittance and 0.25 solar heat gain coefficient - making it suitable for projects in many regions. SunGuard SN 54 low-E coated glass strikes a balance between color neutrality and solar control - so your project can blend in or make a statement.

Visit our glass company in Island, Park, New York, to select the materials you want used.

Our low voltage illuminating pavers offer a quick, easy, and cost-effective solution for ground lighting in gardens, sidewalks, bridges, and pathways, providing charming light accents without ...
