How many hydropower stations are there in Luanda?

Currently, there are two hydropower stations in the middle Kwanza section: HPP Cambambe (operating since 1963; 280 MW) and HPP Capanda (operating since 2004; 520 MW) which mainly supply energy to Luanda and regulate the water level of the Kwanza River.

How many people will be able to electrify Luanda?

the network will reach at least 30% of its population (see graphic presented below) with Luanda reaching up to 90%. According to the criteria adopted for electrification in the "Balanced or Economy-based" model one obtains a distribution of loads between the systems which allows for a greater regional and territorial balance of the country.

Can Angola be electrified?

on the graphic in figure 14 and 7% of the Angolan population, which represents 2% of demand, could be electrified via decentralized systems, such as small hydros, photovoltaic systems or conventional diesel generation. iii) ELECTRIFICATION MODELS

While Luanda and other provincial capitals enjoy stable access, more than 35% of the rural population still lacks reliable electricity. The government aims to reduce this gap to ...

The map in figure 15 shows the model of total electrification of the territory, linking the existing network to the new sub-stations based on the optimization of distance, charge and voltage levels.
