How can Mali improve the energy sector?

The unreliable electrical grid is the main barrier to the development of the mining sector, one of Mali's most important industries. To address these challenges, the transition government is working to expand electricity supply, including off-grid solutions in rural areas, and encourage investment in the energy sector to stimulate the economy.

How a decentralized energy supply works in Mali?

The small size and dispersed locations of villages in Mali for a long time made off-grid decentralized mechanical and electric energy supply the only viable option. A multifunctional platform consists of a 10-hp diesel engine that, as desired, can power a mill, a generator, a pump or other devices mounted on the same rail.

How is energy du Mali financed?

Energie du Mali (EDM), the state-owned electric utility, is poorly managed and heavily subsidized by the government and financed by regional multinational banks, as the relatively high price of its electricity (average \$0.16/kWh) is insufficient to cover the cost of production and distribution (\$0.24/kWh).

How much energy does Mali use?

Mali consumed 60,540,614,000 BTU (0.06 quadrillion BTU) of energy in 2017. This represents 0.01% of global energy consumption. Mali produced 10,816,062,000 BTU (0.01 quadrillion BTU) of energy, covering 18% of its annual energy consumption needs.
