What is a genset in Rotterdam?

Then you have come to Harbour Reefer Service in Rotterdam. At our depot we carry out all kinds of work on gensets, which are also called generator sets. Gensets are used within the transport and storage world as a power supply for shipping containers with a refrigeration unit. But what is a genset and what does it do exactly?

What is a genset on a reefer container?

The Genset,also known as a Clip On Generator,is a handy unit that clips onto the chassis of a Reefer Container to provide power when an external source of power is not available,such as during transport. Our Gensets run on diesel,gasoline or gas. Disc type radial fan for cooling: Sealed large diameter rear bearing.

Which generator sets are best for refrigerated container units?

The most rugged,dependable and easy-to-operate generator sets for refrigerated container units. Carrier's industry-leading PowerLINE Generator Sets are designed and built for continuous,unattended operation for all refrigerated containers transported by road or rail worldwide.

How do gensets work on a container ship?

On a container ship,the genset is connected to the ship's electricity,while during transport the fuel engine is used to generate electricity. In the transportation world,there are two commonly used genset types,the clip-on generator set and the underslung genset.
