What does Portugal's NECP say about offshore wind energy?

Portugal's updated NECP underscores the strategic importance of offshore wind energy not only from an environmental perspective but also for economic and industrial development.

Why is wind energy important to Portugal?

Wind energy offers many benefits to Portugal. Its potential is even greater. Wind energy is a major source of electricity in Portugal, and the wind supply chain has a strong footprint there.

Does Portugal need a wind farm?

Wind energy is a major source of electricity in Portugal, and the wind supply chain has a strong footprint there. Whilst offshore wind offers new perspectives, the speedy permitting and repowering of onshore wind farms remain key for the country to keep reaping the fruits of wind energy.

Does Portugal have a green power plant?

Portugal has new green power plants under construction. Recently, the country published its intentions to increase energy production in Offshore Wind (10 GW by 2030), Green Hydrogen (that should cover 2% of the country's energy needs by 2030) and Solar (9 GW in 2030).

In this case, the analysis is developed to understand, based on the literature, the impact of social acceptance on investments in wind and solar technologies, the importance of energy justice, ...

The Portuguese Government has unveiled an updated version of its National Energy and Climate Plan (NECP) for 2021 - 2030, setting ...

The Portuguese government simplified the environmental requirements for the implementing, among others, renewable energy production plants, through Decree-Law no. 11/2023, of ...

Portugal has new green power plants under construction. Recently, the country published its intentions to increase energy production in Offshore Wind (10 GW by 2030), Green Hydrogen ...

Market Development Targets and Policy able power capacity. In the case of wind power, the objective is to achieve an accumulated capacity of 9.3 GW by the end of 2030, using ...

Website: <https://smart-telecaster.es>

The permitting of both new and repowered wind farms is still too slow and too complex, in Portugal and across Europe. New EU rules ...

Portugal risks becoming even more dependent on electricity imports if more wind and solar capacity are not installed. Electrification and grid modernisation are essential to ...

Portugal risks becoming even more dependent on electricity imports if more wind and solar capacity are not installed. Electrification ...

A new version of the NECP 2030 was released, with wind power continuing to play an important role in decarbonization of the power system, setting targets of 10.4 GW for onshore wind and ...

This study examines Portugal's electricity market outcomes in terms of prices, generation mix, and emissions for different wind and solar capacities, using the National ...
