(2) Guarantee the electrical detection performance of the base station power environment monitoring system, equipment control performance, system alarm performance, important ...

Faults incurred by Base Transceiver Stations pose challenges to telecommunication organisations. Mostly the faults are due to BTS failures. BTS power system failures can have a ...

Did you know a single communication base station failure can disrupt services for 5,000+ users? As global 5G deployments accelerate - with over 7 million base stations projected by 2025 - ...

There are two parts in the energy saving calculation system and method of the main base station communication equipment.

This study investigated the application of machine learning for power failure prediction in BTS to proactively mitigate the effects of outages and enhance mobile ...

This study is dedicated to predicting potential failure indicators in BTS power systems using deep neural network architectures, such as recurrent and convolutional neural networks.

To assess the applicability of these algorithms, a special dataset has been developed that simulates the process of failures in the main elements of the base station: the ...

The large-scale construction of base stations in high mountains and outdoors has led to frequent base station communication accidents caused by lightning disasters.

CNN_LSTM model in accurately predicting BTS power system failure indicators for the next thirty minutes. The significance of accurate prediction models in proactively detecting failures and ...

In the communication power supply field, base station interruptions may occur due to sudden natural disasters or unstable power supplies. This work studies the optimization of ...

Power base station communication maintenance indicators
