In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

All net new generating capacity in 2026 is forecast to be provided by renewables and batteries, according to new EIA data.

US battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity. ...

Solar is expected to account for the largest share of new capacity in 2024, at 58%, followed by battery storage, at 23%. A record addition of utility-scale solar is expected in 2024 if the ...

Solar and energy storage accounted for 84% of new electricity generation capacity added to the U.S. power grid last year, but the industry faces a challenging future with the new ...

Solar and energy storage accounted for 84% of new electricity generation capacity added to the U.S. power grid last year, but the ...

US battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity. This growth highlights the importance of ...

Whether installed solo on utility-scale sites or attached with solar in the residential market, battery energy storage has found its stride. "The rapid energy storage deployment ...

This report was created using Cleanview's renewable energy tracking platform, which provides comprehensive monitoring of clean energy projects across the United States.

Energy storage boosts electric grid reliability and lowers costs, 47 as storage technologies become more efficient and economically viable. One study found that the economic value of ...

Proportion of new energy storage
