Are solar panels profitable in Israel?

While the system can bring a double-digit return on investment for some, for the hundreds of thousands who own apartments in shared buildings, it is not yet profitable. Over the past few years, it has become more and more popular for homeowners in Israel to set up solar panels on their roofs or in their yards -- and for good reason.

How much does a solar panel cost?

A solar panel of about 100 square meters costs roughly NIS 70,000 to install and produces an average of 10 kilowatts of energy per hour. Assuming there will be about 1,700 to 1,800 hours of sunlight per year, at the current rate of about half a shekel per kilowatt, solar panels should bring an annual income of NIS 8,000 to 9,000.

How to set up solar panels in Israel?

When setting up solar panels, the first step is contacting a company that installs solar systems. Today in Israel, there are many companies of this type in the growing market, and it is worthwhile to conduct thorough market research and get recommendations from others who have already been through the process.

Should Israel use solar panels?

Another advantage to expanding the use of solar panels is that it reduces Israel's dependence on oil-produced energy, which in today's world affords great power to a fairly small number of countries, most of which are characterized by problematic regimes, to say the least.

Explore Israel solar panel manufacturing with market analysis, production statistics, and insights on capacity, costs, and industry growth trends.

From the choice of materials to national and regional pricing trends, every aspect is carefully analyzed to make solar energy more accessible, efficient, and profitable. Discover ...

According to an assessment published by GreenDays - a solar installation price comparison platform - in the business daily Globes, the cost of installing rooftop solar panels ...

Estimates the energy production and cost of energy of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, installers and ...

According to the Ministry Energy, today the average yield for a rooftop solar energy system reaches 15%, and if the roof is large enough - it is certainly ...

Assuming there will be about 1,700 to 1,800 hours of sunlight per year, at the current rate of about half a shekel per kilowatt, solar panels should bring an annual income of ...

The installation cost of photovoltaic panels in Israel is a ...

Discover how the new regulation on solar panels in Israel can transform your home into an eco-friendly space. Benefit from tax incentives, quick reimbursements, and various ...

Unlike Germany's declining feed-in tariffs (now at EUR0.073/kWh), Israel combines grants covering 30% of installation costs with net metering. The Ministry of Energy's 2025 budget allocates ...

Thinking about going solar in Israel? With abundant sunshine and government incentives, photovoltaic (PV) panel installation has become a hot topic. This guide breaks down the costs, ...
