Solar thermal technologies can be deployed in most European regions and are a particularly good option in Europe's eastern and south-eastern countries, where solar thermal heat is often the ...

Many European countries generated record levels of solar power in the first half of 2025, according to figures presented by the ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

In our recent LinkedIn post highlighting the increase in solar output this year - a near 22% gain in Western Europe - we considered some of the drivers that contributed to that ...

While eastern regions enjoyed strong solar irradiance, western and southern areas encountered challenges due to storms and persistent cloud cover. High pressure settled over ...

Sunny summer conditions delivered record photovoltaic (PV) production across much of western Europe in June 2025, as high pressure systems brought sustained clear ...

Sunny summer conditions delivered record photovoltaic (PV) production across much of western Europe in June 2025, as high ...

Many European countries generated record levels of solar power in the first half of 2025, according to figures presented by the Fraunhofer Institute for Solar Energy Systems (ISE).

Solar thermal technologies can be deployed in most European regions and are a particularly good option in Europe's eastern and south-eastern ...
