Solar control glass products for the home specialize in reducing the risk of interiors overheating, while allowing you to retain clear views. The glass composition is the key factor to reduce the ...

Solar control glass is made of specially coated or tinted glass that has specific optical properties that allow it to block a portion of the sun's radiant heat energy. This glass ...

Heat-resistant glass plays a crucial role in maximizing solar energy reliability and efficiency in modern photovoltaic systems. The integration of specialized heat-resistant glass ...

In hot climates, solar control glass can be used to minimise solar heat gain and help control glare. In temperate regions, it can be used to balance ...

In general, tempered solar glass can withstand temperatures ranging from -40°C to 200°C , which is sufficient for most solar applications. However, in extreme environments, specialized solar ...

COOL-LITE[®] are Saint-Gobain Glass Solar control glass; Assembled in insulating glazing units (IGU), they help reducing overheating within buildings while letting the daylight in. Offering ...

Our SILVERSTAR SUNSTOP coatings are suitable for use in warm climates and in particularly intense sunlight. This means air-conditioning can be reduced or avoided altogether - even ...

In hot climates, solar control glass can be used to minimise solar heat gain and help control glare. In temperate regions, it can be used to balance solar control with high levels of natural light.

Heat-resistant glass is designed to withstand high temperatures without breaking. The glass's capability to withstand high temperatures is mainly due to a low coefficient of thermal ...

The special properties of solar control glass let natural daylight in, while reflecting a high proportion of the sun's heat. The indoor space remains bright but cooler compared to ...

Solar glass heat resistance
