Professor Kwanyong Seo and his research team at the School of Energy and Chemical Engineering at UNIST in Korea have developed ...

A team of researchers at Nanyang Technological University in Singapore has developed a process to use solar panel glass waste as a raw material for cathodes in solid ...

Recent advancements in battery technology, particularly lithium-ion and solid-state batteries, promise to improve the efficiency of ...

Professor Kwanyong Seo and his research team at the School of Energy and Chemical Engineering at UNIST in Korea have developed a new method that can directly ...

Glass battery technology uses a solid glass electrolyte for safer, faster charging, higher energy density, and longer lifespan compared to traditional batteries.

These solar glass panels filter radiation, both ultraviolet (up to 99%) and infrared (up to 95%), giving protection from potentially harmful radiation, in addition to generating electricity and ...

Recent advancements in battery technology, particularly lithium-ion and solid-state batteries, promise to improve the efficiency of energy storage systems connected to solar glass.

This dual approach--using batteries in tandem with grid connectivity--enhances the reliability of photovoltaic glass installations, ensuring energy availability in various ...

The electrolyte is a highly conductive glass formed from lithium hydroxide and lithium chloride and doped with barium, allowing fast charging of the battery without the formation of metal dendrites.

Researchers have developed a new method that can directly charge a battery from a smartphone screen. Developed by a research team affiliated with UNIST, the method can ...

Solar glass using batteries
