California, Texas, and Florida generated the most electricity from solar in 2024. Texas, Iowa, and Oklahoma generated the most from wind. This Climate Matters analysis was ...

A new analysis of solar and wind power shows its generation worldwide has outpaced electricity demand this year.

For the first time, solar photovoltaics accounted for more than 10% of total U.S. electricity generation in a single month. According to the ...

The U.S. Energy Information Administration (EIA) has released data for the first six months of 2025 that reveals solar provided ...

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power ...

Current commercially available solar panels convert about 20-22% of sunlight into electrical power. However, new research published in Nature has shown that future solar ...

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release ...

The U.S. Energy Information Administration (EIA) has released data for the first six months of 2025 that reveals solar provided almost 9% of total U.S. electrical generation, ...

Dive Insight: The report showed the continued dominance of solar in new generation capacity amid robust demand growth projections. That could change, however, as ...
