Are solar panels taking off in Africa?

The first evidence of a take-off in solar in Africa is now here: The last 12 months saw a big rise in Africa's solar panel imports. Imports from China rose 60% in the last 12 months to 15,032 MW. Over the last two years, the imports of solar panels outside of South Africa have nearly tripled from 3,734 MW to 11,248 MW.

Are solar panels going up in South Africa?

In the last two years, the imports of solar panels have tripled outside of South Africa. They rose from 3,734 MW in the 12 months to June 2023, to 11,248 MW in the 12 months to June 2025. The increase in imports is more than a single month spike. Monthly imports jumped to a record in December 2024, but have consistently elevated since.

Does Africa have solar power?

Africa holds vast solar potential, with 60% of the world's best solar resources, yet solar PV currently accounts for only 3% of the continent's electricity generation. As global efforts intensify to triple renewable energy capacity by 2030, Africa's role in achieving this target is more critical than ever.

Where do Africa's solar panels come from?

The vast majority of Africa's solar panels come from Chinese imports. That is because China produced 80% of the world's solar panels in 2024, and is by far the biggest exporter. Africa depends heavily on imports because domestic solar panel manufacturing is still limited.

Explore how cheap solar panels are reshaping lives and economies across Africa, enhancing energy access and driving growth.

China is supplying low cost solar panels to many African nations, including South Africa. Doing so also increases its political power.

Cheap Solar Is Transforming Lives and Economies Across Africa Chinese panels are now so affordable that businesses and families are snapping them up, slashing their bills and ...

According to a new analysis of China's solar panel exports data from energy think tank Ember, solar panel imports into the continent ...

There has been a major pick-up in solar panel imports into Africa over the last 12 months - a shift that is likely

to impact almost every country on the continent. This report ...

Discover how Africa is transforming its energy landscape by harnessing solar power. Despite challenges, the continent's growing commitment to solar energy is paving the ...

There has been a major pick-up in solar panel imports into Africa over the past 12 months - a shift that is likely to impact almost ...

There has been a major pick-up in solar panel imports into Africa over the past 12 months - a shift that is likely to impact almost every country on the continent.

Discover how Africa is transforming its energy landscape by harnessing solar power. Despite challenges, the continent's growing ...

As global efforts intensify to triple renewable energy capacity by 2030, Africa's role in achieving this target is more critical than ever. The Africa Market Outlook for Solar PV 2025-2028 ...
