For example in a string sentence, position of e is 1, 4, 7 (because indexing usually starts from zero). but what I find is both of the functions `find()` and `index()` returns first position ...

String stands for `System.String` and it is a Framework type. `string` is an alias in the C# language for `System.String`. Both of them are compiled to `System.String` in IL ...

String Literals: Moreover, a string literal always refers to the same instance of class `String`. This is because string literals - or, more generally, strings that are the values of ...

In String Interpolation, we simply prefix the string with a `$` (much like we use the `@` for verbatim strings). Then, we simply surround the expressions we want to interpolate with curly braces ...

6 One thing that is not covered here is that it depends if we compare string to c string, c string to string or string to string. A major difference is that for comparing two strings size equality is ...

7 `String[] errorSoon = new String[n];` With `n` being how many strings it needs to hold. You can do that in the declaration, or do it without the `String []` later on, so long as it's before you try use ...

I want to get a new string from the third character to the end of the string, e.g. `myString[2:end]`. If omitting the second part means "to the end", and if you omit the first part, ...

0 When you want to split a string by a specific delimiter like: `_` or `|` or, etc. it's much easier and faster to split using `.split()` method as in the top answer because Python string methods are ...
