How much heat does a sf120 heat?

SF120: 120K BTU heats up to 2800 sq ft. Odorless, quiet, near-zero CO. Commercial-grade for shops, garages, pole barns. Dual fuel: diesel/kerosene. Made in USA.

Why do you need a sf120 thermostat?

Allows quick access to the nozzle assembly making tune-ups and maintenance ultra-fast and easy. This advanced system is another reason why SUNFIRE offers the ultimate heating experience. The SF120 is wired for optional thermostat use. you can use any standard mechanical or battery-operated wall thermostat of your choice.

What is a generator model & how does it work?

Application Versatility: Generator models are used in various settings ranging from renewable energy projects to conventional power plants. This flexibility is essential as it allows operators to pivot based on available resources and energy demands.

How many square ft can a sf120 warm?

The SF120 can warm up to 2,800 sq. ft. of indoor space and comes wired to optionally connect to a standard mechanical or battery-operated wall thermostat to regulate the temperature in a shop, garage, or warehouse. The comfort grip tube frame makes it very easy to lift and transport to various job sites with ease.
