What is the Energy Star product specification for uninterruptible power supplies?

Following is the Version 2.0 ENERGY STAR Product Specification for Uninterruptible Power Supplies (UPSs). A product shall meet all of the identified criteria if it is to earn the ENERGY STAR. Static UPS: UPS where solid-state power electronic components provide the output voltage.

What is an uninterruptible power supply?

Uninterruptible power supplies or UPSs are battery chargers consisting of a combination of convertors, switches and energy storage devices (such as batteries), constituting a power system for maintaining continuity of load power in case of input power failure. 10 CFR 430 Appendix Y 2.27.

Are uninterruptible power supply standards sustainable?

Modern uninterruptible power supply standards now place a heavy emphasis on energy efficiency, not just safety and reliability. This aligns with global sustainability goals and can lead to substantial cost savings over time.

Who is responsible for enforcing uninterruptible power supply standards?

Multiple global and regional organizations are responsible for developing and enforcing uninterruptible power supply standards. Each body brings a unique focus, often catering to specific industries or geographies.

In this post, I want to explore uninterruptible power supply standards from the ground up: what they are, why they matter, and how they act as the backbone of reliable, safe, and efficient ...

These clarifications have been carried over from a Version 1.0 guidance document and cover issues such as UPSs that operate with both 3-phase and single-phase power, UPSs ...

When power is restored at the normal supply terminals of the system, controls automatically synchronize the inverter with the external source before transferring the load. The rectifier ...

The following test method shall be used for determining product compliance with requirements in the ENERGY STAR Eligibility Criteria for Uninterruptible Power Supplies (UPSs).

This manual is provided for the use of all Departments of the ITER Organization and is addressed to system specifiers, designers and users of electrical components in otherwise non-electrical ...

1.1 This section applies to uninterruptible power supplies. 2.1 UPS system type, configuration, capacity and capacity of back-up batteries shall be appropriate to the needs of the project as ...

Uninterruptible power supply systems are operating ungrounded during power transfer, critical to the overall design of electrical and power systems in a nonresidential building.

This section of the Application and Installation Guide generally describes Uninterruptible Power Supply. Additional engine systems, components and dynamics are addressed in other ...

The U.S. Department of Energy (DOE) has published (link is external) a Federal Register Final Rule (FR) amending its test procedure pertaining ...
