What is Senelec & Karpowership doing in Dakar?

National utility Senelec partnered with Turkish energy firm Karpowership to begin generating electricity offshore Dakar using an innovative floating system. The project utilizes a floating storage and regasification unit to supply LNG to Karpowership's KPS 10 powership, with power generation officially commencing on April 29.

Is Karpowership a viable offshore power generation solution?

With current installed capacity of 335 MW, Karpowership's floating power assets now account for approximately 25% of Senegal's total electricity supply, demonstrating the viability of innovative offshore power generation solutions. Source: energycapitalpower.com

How does Karpowership support FSRU?

Karpowership has since increased its capacity to 335MW, covering 25% of the nation's needs through its power barges at the Port of Dakar. In 2022, Karmol secured \$71 million in funding from Japan Bank for International Cooperation and MUFG Bank to support the FSRU's operations.

On April 29, 2025, a floating power plant operated by Karpowership's KPS 10 began generating electricity using liquefied natural gas (LNG) off the coast of Dakar, Senegal.
