Does greenvolt have a Bess project in Portugal?

Greenvolt and Galp have both deployed 5MW BESS projects in Portugal in the past. In eastern Europe, Moldova is in the process of completing a bidding process for the procurement of a 75MW BESS and 22MW internal combustion engine (ICE) project, called the Moldova Energy Security Project (MESA).

What are the benefits of using Bess with gas engines?

Pairing BESS with gas engines can enhance performance and provide cheaper, cleaner, and a more resilient power solution. In addition, the inclusion of a flywheel inertia solution can provide additional system stability, fast response, and optimisation of battery life.

What is Bess & how does it work?

BESS can minimise transmission owner and distribution network operator reinforcement costs and reduce congestion management whilst also control voltage, provide reserves and ancillary services, and maintain resilience of network electricity supply.

What are the revenue streams for Bess?

Revenue Streams Revenue streams for BESS can typically be categorised into ancillary services, wholesale trading and capacity market mechanisms. Ancillary services encompass frequency regulation, voltage control, reserve services, and black start capabilities for the grid.

This blog post forms part of our new series, "Introduction to BESS (Battery Energy Storage Systems) Markets", which will cover the drivers and revenue streams of different EU ...

Aquila Clean Energy EMEA, the European renewable energy arm of German investment management firm Aquila Group, announced that it was among the winners in ...

Galp has kicked off construction on five new battery energy storage system (BESS) projects in Spain and Portugal, marking a major step in its clean energy strategy. According to ...
