---

The energy capacity of new battery, wind, and solar projects that received approval climbed to 45GW this year, 96% higher than in 2024, according to data from Cornwall Insight.

Coordinated planning of hydro-wind-solar-storage systems can effectively mitigate the output volatility of renewable energy sources. This paper proposes a distributionally robust ...

This study investigates control and energy management strategies for hybrid renewable energy systems combining wind and solar ...

This study investigates control and energy management strategies for hybrid renewable energy systems combining wind and solar power with battery storage.

Here, we investigate how the number of years of past weather data used in designing least-cost systems relying on wind, solar, and energy storage affects resource ...

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and ...

Solar and wind power are planned to develop in tandem with battery storage so excess energy can be saved while nature provides wind or sun. Battery storage is meant to ...

With the transformation of the global energy structure and the rapid development of new power generation technologies, new power system planning faces the challenge of multi ...

Using DC channels for electricity transmission across regions is a smart strategy to enhance the use of renewable resources such as solar and wind energy, while also minimizing ...

New York's clean energy future requires accelerated growth in offshore and onshore wind and solar, as well as a storage, transmission, and distribution infrastructure to move renewable ...
